

Teng-Wei (Dans) Huang

AI SUPPORT LEAD | CONVERSATIONAL AI PROGRAMS, VENDOR OWNERSHIP, TEAM BUILDING

Taipei, Taiwan - Relocating to San Francisco | dans.huang@hey.com | +886 972 272 189 | linkedin.com/in/dans-huang | Portfolio

I run the conversational AI behind a global support operation: a 24/7 agent that finished 44.7% of closed email tickets in July 2026, and a governed multi-agent system that other departments now use without me. Before those I owned an external Help Center chatbot platform partner end to end - selection, contract, conversation design, and the decision to end it. Seven years took me from this company's front line to running the function, and the job now is as much the escalation logic, the metrics I have to defend in front of leadership, and the specialists who take the work over, as it is the systems themselves.

EXPERIENCE

Support and Quality Control Manager

Mar 2024 - Present

POSITIVE GRID

- Own the conversational AI program end to end: roadmap, escalation design, evaluation bar, releases, published metrics, and incident response. Designed the customer-facing agent's escalation logic on one principle - authority follows the stake of the case, not the confidence of the model - so money, warranty, and shipment always route to a person.
- Scaled a 24/7 email agent to finish 42.6% (June 2026) and 44.7% (July 2026) of closed tickets by final-assignee share, and deliberately publish AI handoff rate as a second, separate metric so designed-in human escalation is never disguised as failure.
- Owned the Help Center chatbot platform partner through its full lifecycle across 2025 - selection, contract, conversation design, escalation logic, performance review - and made the call to end it when vendor engineering capacity stopped matching the roadmap. Diagnosed that its reported resolution rate counted timed-out abandoned chats as successful deflections; carried that measurement discipline into every metric since.
- Built and operate a multi-agent conversational system in Slack: three specialist agents on named human reporting lines, a three-tier autonomy model, and a shadow-mode gate requiring 20 matched cases and 95% agreement with human decisions before any pattern runs unsupervised. Product, e-commerce, and BI teams now query it directly without support involvement.
- Report the program to leadership monthly - nine consecutive Voice-of-Customer reports tracking whether each customer-facing problem is improving month over month, not a snapshot - and answer to CEO and Product directly on the findings.
- Built the governed knowledge and retrieval layer AI answers depend on: confidence-gated hybrid search, lifecycle controls, and retrieval-layer filtering of restricted content after a prompt-only rule proved insufficient. Help Center AI search answered 6,667 questions in July 2026, reaching 7.0% of visitors.
- Established a 250-case production evaluation suite across 11 support categories and 25 adversarial security cases, with shadow mode, staged activation, regression gates, and rollback; selected the production model through a scored five-model comparison on pass-rate-versus-cost.
- Grew a non-technical frontline specialist into the daily owner of the AI agent in six months. Team went from about ten to five with no backfill as automation absorbed the queue and the remaining specialists moved into AI, automation, and knowledge ownership.

SELECTED PROGRAM METRICS

AI resolution / AI handoff: 42.6% and 44.7% final-assignee share of closed tickets, June and July 2026; handoff published separately and allowed to disagree

Customer satisfaction: 86.6% on 448 responses, July 2026, from a survey denominator narrowed on purpose and explained on request

Knowledge retrieval: 6,667 AI-answered Help Center questions in July 2026, reaching 7.0% of visitors, up 27% in intensity since May while site traffic declined

Governance: 20 matched cases and 95% human agreement required before any AI pattern runs unsupervised

EXPERIENCE, CONTINUED

Technical Support Manager Jul 2023 - Mar 2024

POSITIVE GRID

- Led queue, capacity, launch readiness, hiring, budget, and complex escalations for a global support operation handling roughly 48,000 tickets a year.
- Owned hiring on a process I designed, rebuilt after one environment-fit miss to give candidates a deliberately unvarnished picture of a fast, chaotic operation; the latest hire through it is among the team's strongest. Handled three performance exits in my first year, and learned from the two I delayed that protecting a struggling individual is paid for by the team.
- Built Zendesk reporting, scorecards, and quality-platform calibration to make volume, quality, and coaching needs visible; owned that vendor relationship for years and wound it down as AI absorbed routine auditing.
- Partnered with Product, Ecommerce, and Web to turn recurring friction into journey and process fixes, including a standing loop feeding support-reported defects back into the QA team's own test coverage.

Senior Training Specialist Jan 2021 - Jun 2023

POSITIVE GRID

- Owned product and process training for in-house and outsourced support; delivered 50+ English and Mandarin sessions and onboarded every new hire through a structured program.
- Built the support knowledge base across five iterations and introduced the quality-audit platform, creating the documentation, audit, and coaching loop that later became the foundation for AI operations.

Technical Support Specialist Jul 2019 - Dec 2020

POSITIVE GRID

- Resolved global hardware, software, and digital-audio issues through email, live chat, and remote sessions, and translated recurring failures into product and process feedback.

Technical Support Specialist - Yamaha Music & Electronics Taiwan 2018 - 2019

Sales & Support - ATB Music World, Taipei 2017 - 2018

SKILLS

Conversational AI: chatbot platform selection and vendor management; conversation and escalation design; containment, deflection, and resolution-quality measurement; autonomy governance and shadow-mode graduation

Support stack: Zendesk Admin, Explore, REST APIs, and side apps; MaestroQA; Jira; Qase

AI and retrieval: LLM APIs; RAG and hybrid retrieval; Pinecone; Qdrant; evaluation design; Langfuse tracing; n8n

Systems: Python automation services; Slack Bolt; Bash; cron; launchd; Git and GitHub

Languages: Mandarin, native; English, professional (TOEIC 965)

EDUCATION

National Taiwan University of Science and Technology

Bachelor's Degree in Industrial Management, 2012 - 2015

All metrics are period-labeled and defined as stated; measurement methodology is documented in the portfolio, with synthetic demonstrations in place of employer systems. Employer data, code, and internal tooling are not published.
